

Soliflow

by PROCOPI

COMPACT FILTRATION UNIT

Soliflow is an almost invisible filtration unit that runs so silently you could forget where you installed it.

Absolute discretion
Seamless integration

Installed below the deck, the SOLIFLOW filtration unit is totally hidden from view. The continuity and purity of the deck lines are preserved: an aesthetic advantage that cannot be ignored when selecting your filtration solution.

Total silence

The Soliflow filtration unit features an air-cooled pump (no fan), it discreetly filters the pool water without disturbing your haven of peace and relaxation.

Furthermore, positioning of the return fittings is unrestricted. You can capitalise on this feature to select a position that optimises mixing, and hence purification, of the pool water.

Equipment: top quality!

Made of injected ABS, SOLIFLOW's is impeccably finished. Soliflow's outer beauty is not skin deep, this filtration unit incorporates numerous attractive features:

- An air-cooled motor (exclusive). No fan, no noise and the water even captures a few precious heat calories.

- Automatic water level regulator that compensates water loss due to natural phenomena, such as evaporation.

- The pump is oriented vertically so water cannot travel up to the motor, the pump cannot de-prime.

- Soliflow pumps are designed and manufactured according to state and industrial standards. This guarantees quality.

Filtration: cartridge quality

Soliflow is fitted, as standard, with a large capacity cartridge. This reusable filter media provides incredible

autonomy between cleanings. The cartridge provides a filtration finesse of 20 microns, water immerses crystal clear. Disposable filter bags are available for use at the beginning of the season, or during the winter. Unique and practical.

Operation: safe and reliable

To guarantee top quality, Soliflow units are systematically pressure tested in the factory. Electrical and mechanical components are inaccessible to children, installed under a cover that is locked with a key.

Energy: spectacular savings

The pump position (patented) removes the necessity for suction lines, and hence the associated load loss that is a feature of other filtration systems. Soliflow thus optimises motor performance and, as a direct result, cuts energy costs by 30% (while maintaining a flow rate comparable to that of a traditional filtration system).

Features:

- Filtration finesse = 20 μ with cartridge
- Filtration surface area = 6.9 m² with cartridge
- Unrestricted positioning of the return fittings and the underwater light
- Glass fibre reinforced acrylic housing
- Dimensions in mm: W 400 x L 800 x H 100
- Weight = 22 kg
- Timer and transformer 300 W
- Complies with EC standards, C15-100 and TÜV approved
- Covered by a 2 year guarantee
